

It's not your tools, it's how you use them: Assessment design in a paramedic capstone program

James Thompson

Senior Lecturer in Paramedics, College of Medicine & Public Health

**12 - 1pm Tuesday 13 November 2018
Dean's Conference Room, Level 6, FMC**

Includes a light lunch

The final paramedic undergraduate topic has been tasked with 'bringing it all together' for students and 'readying' them for entering the workforce. Central to tackling this challenge has been an innovative use of assessment. In this session James will share some of the current approaches used in subject, and lessons learned along the way.

For more than a decade James has been involved heavily in curriculum design and teaching extensively throughout nearly all topics of the paramedic program. The breadth of his teaching contributions reflect an equally broad clinical background within dual nursing and paramedic disciplines, spanning over 20 years.
